Military Training: Its Effectiveness for Technical Specialties Is Unknown: Pemd-91-4

By -

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 110 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. GAO reviewed the information on which the military services based their evaluations of the effectiveness of their technical training programs, recruit selection, and position classification decisions. GAO found that: (1) mean Armed Forces Qualifications Test (AFQT) scores rose by approximately eight points between 1981 and 1989 for both men and women recruits; (2) in 1980, white recruits scored approximately 21 points higher than minority recruits, but by 1989 the difference decreased to 15 points; (3) mean AFQT scores in all services were significantly higher in 1989 than in 1981; (4) mean scores on electronics tests for the three services changed very little from 1985 to 1988, but Army and Navy scores declined significantly in 1989, while Air Force scores remained higher; (5) a smaller percentage of recruits qualified for the most demanding technical specialties than at any time since 1981; (6) women and minorities were severely underrepresented among those who qualified, since they generally scored lower than white men; (7) course grades for five Army specialties were not equally reliable indicators of performance during training; (8) there were inconsistencies in Army...

Reviews

Very useful to all of category of people. I actually have read through and that i am sure that i will likely to go through once more again in the foreseeable future. I realized this book from my i and dad advised this publication to find out.

-- **Alta Kirlin**

This is the very best publication i have got read until now. It is definitely simplified but shocks within the fifty percent of the pdf. You may like how the article writer create this pdf.
